

Environment Policy

Endress+Hauser in its efforts towards sustainable business has committed itself towards, United Nations guiding principles on business and human rights, sustainability and environment, we aim for sustainable and environment friendly operations to environmental laws and regulations.

We integrate environmental impact and mitigation needs, including the Science Based Targets Net Zero Pledge, into our business strategy. With continuous improvement and risk management central to our approach, we align our priorities across the group considering legal and stakeholder requirements. Aligned with the Endress+Hauser Group Strategy, set and review environmental targets, address concerns across our value chain and support group level reporting.

We actively engage with stakeholders and share best practices to reduce environmental impact and mitigate risks. We collaborate and align with value chain stakeholders, committing to accelerate our environmental progress where relevant.

We evolve our operations to meet climate change challenges, improving key areas both economically and ecologically. This means that we look at our environmental impact to the outside and consider also environmental impacts on our business performance. Furthermore, we are committed to the Science Based Target Initiative and to the following selected topics;

The list is not exhaustive: -

- Enhance energy efficiency and utilize sustainable energy sources
- Minimize water and other resource consumption
- Boost recycling and reduce waste, including packaging waste
- We lower emissions, curb pollution of the environment
- We reduce the environmental footprint of our products
- Ensure controlled handling of hazardous goods
- Take steps to mitigate risks of our products to people and the environment
- We comply with requirements on substances of concern and very high concern
