Searching with previously purchased products' serial numbers lets you immediately find spare parts, documentation and device drivers. With the experience of more than 15 years of data history and over than 40 million devices, Endress+Hauser makes it easy for you to buy only the spare parts you need – or the entire product. Feel confident that you get the right product and save time without having to look for the corresponding papers.

- Simple and safe process anyone can execute, even without detailed product knowledge

Access operating instructions and technical documentation while in the field

Our Operations App gives you full access to up-to-date information for your Endress+Hauser installed base, no matter where you are. Quickly find information, instructions, and manuals among other documentation directly through the App.

- The app is available for download on iPhones or iPad in the App Store, and on Android-based Smartphones in Google Play
- Quick access to your documentation from the field
- For iOS and Android

Find favorite products with own reference

Saving all your products as favorites lets you standardize and easily reorder them in the future. You can even give them your own reference number so that your colleagues can look them up which is so much more convenient and eliminates unnecessary errors.

- Enforce technical standardization and ensure shopping within the defined standard
- Avoid mistakes

Find the most suitable product that fits your application

Select and size the best product that fits your industry specific application online. Enter your parameters e.g. flow, pressure, level, temperature, and receive recommendations for best suited products. Compare them and make a safe decision. Once this is done, you can start configuring your product. 2D drawings and 3D models are available in the common CAD data formats.

- Recommendations are based on specific measurement requirement
- Reliable, precise, easy to use

Integrated with your ERP System

Is the integration of suppliers with your ERP system part of your purchasing strategy? For customers with a high number of transactions per year, we offer ERP integrations directly or via marketplaces/platforms such as SAP ARIBA, Proactis, Elemica, Tungsten, or Basware.

The first step is to connect your procurement system with endress.com via the interfaces OCI (SAP) or PunchOut (ARIBA) (pre-process). Your employees receive access from your procurement system to endress.com with all products and commercial information. The users can put the required products into the shopping cart and finally transfer all data with order code, prices and delivery time to your procurement system. The order is finally processed in your ERP.

As a second step, a back end integration project can be executed to enable the digital exchange of orders, purchase order responses, delivery notes and invoices between the systems - either directly or with a marketplace/platform involved. With this integration you will:

- **Reduce process costs**
- **Accelerate process throughput times**
- **Increase process quality**

With more than 15 years of integration experience, we guarantee professional and prompt implementation.
